

CM-T10-PRO with ColorRoll™

Wireless Color Mixing transmitter for Color Maker™ series LED Fixtures with ColorRoll™ Technology

CM-T10-PRO hand held wand can control up to 10 separately addressed Color Maker Series LED fixtures. CM-T10-PRO incorporates our latest technology including our new ColorRoll feature which allows our Color Maker series LED fixtures to fade through pre programmed colors without the need for a continuous signal from the transmitter.

Features:

- * 10 fixture cue buttons with Up / Down RGB controls.
- * ALL Edit button allow user to edit all fixture simultaneously, fixtures do not require identical address settings.
- * 10 Recordable Scenes which can be played back with fade control.
- * 3 ColorRoll prompt buttons which can be programmed to create custom ColorRolls with adjustable roll times. This feature does not require continuous transmitter signal.
- * Digital readout to display LED color levels from 0 to 100 %

ColorRoll™ Technology

CM-T10-Pro features our new ColorRoll technology. ColorRoll is a programmable feature which allows the user to program up to 10 colors, each color can be a combination 1 % to 100 % of red, green and blue. These color settings are sent to the fixture for processing, and after the 100 microsecond download the transmitter can be turned off since this feature does not require continuous signal to operate. The 10 colors then fade from the first color to the last with flicker free transition the process then repeats until the fixture receives a stop or a blackout code. The Roll time can be adjusted on-the-fly from 3 second roll to 15 minute roll. Fade can also be turned off on-the-fly so the colors flash through all programmed colors for a disco affect.

Scene Control

The CM-T10-Pro provides the user with 10 programmable scene buttons. Scenes are set up by adjusting all 10 fixtures RGB levels and then can be save to one of the 10 scene buttons. To play back a desired scene press the Play button followed by scene button and the programmed scene will fade to selected scene. This allows the user to change an entire rooms look without the flicker usually found with plug and play systems. The user can also select fade time from Hi to Low or turn off fade for instant color change. The user can set a scene then edit any one of the 10 fixtures to make last minute changes. The transmitter always knows what each one of the fixtures RGB levels are so the digital readout can give you updates on each fixtures RGB levels

Protective Rubber Boot

The CM-T10-PRO can be purchased with a protective rubber boot. The boot is removable and is made of durable rubber to protect the CM-T10-PRO from physical damage.

Boot will slide off the CM-T10-PRO to change 9 volt battery. Battery door is located in back side of transmitter. For best result use commercial grade alkaline batteries.

Specification

Dimensions:

Height 8.2 inches

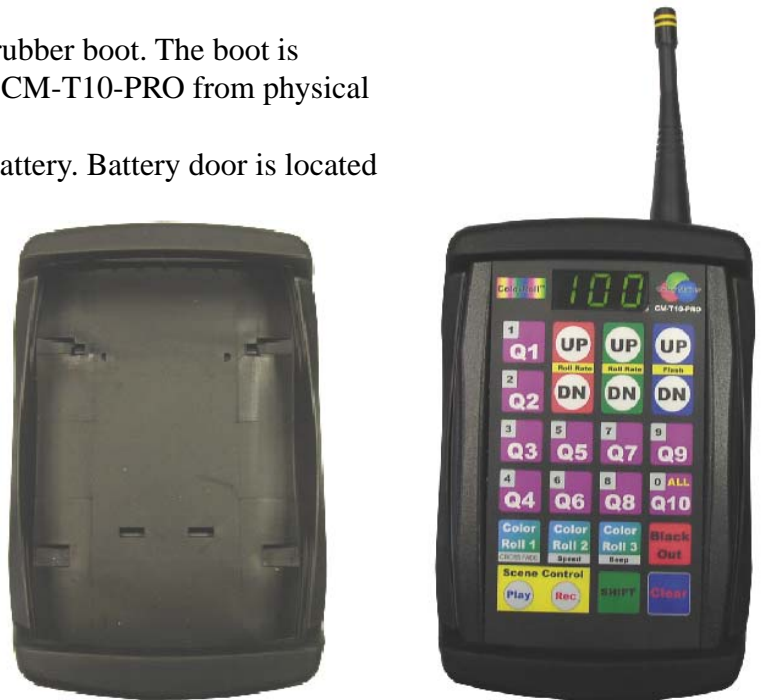

Width 3.6 inches

Depth 1.2 inches

Frequency: 916 MHz

Battery: 9 volt

Range: 400 feet

The CM-T10-PRO is compatible with all our ColorMaker Series LED Fixtures. Some features of the CM-T10-PRO will only operate fixtures with ColorRoll technology. See fixture specifications for more details.
